“HUMCO” Appler 294-60

STRAIN-2

A FINE STRAIN OF APPLER OATS

This strain of oats just six years from its parent plant and a very high yielder.

ITS CHARACTERS:

1. Very uniform.
2. Heavy production (will average 10 bus. per acre more than best Fulghum).
3. Eight days later than regular Fulghum.
4. High per cent grain to straw (45-50%).
5. **Smut resistant.**
6. **Cold resistant.**

This oat in test with other smut resistant varieties, though heavily inoculated with smut spores, developed no smut at all. Appler oats have always been highly resistant to oat smut.

We believe this to be one of the finest strain of Pedigreed Appler Oats being offered. It is very much superior to any strain we have offered in the past.

In spite of severe cold winter of 1934, this oat stood up 90% good, better than any other oat tested. This record made in spite of planting first week in December, 1933, which is late planting for Appler oats.

Mr. John H. Devine, of Tallulah, La., in letter to us of July 2, 1936, says: “The Appler oats purchased from you the past year had an average yield of 95 bushels per acre, where we used 150 lbs. nitrate per acre. Where no nitrate was used 55 bushels per acre.” He used our Appler 294-60—Strain 2.

“HUMCO” Fulghum 106-4

STRAIN-2

A NEW STRAIN—HIGHLY COLD RESISTANT

ITS CHARACTERS:

1. **Production**—A Heavy Yielder (77½ bu. per acre, in test plot).
2. **Earliness**—Three days later than regular Fulghum.
3. **Straw**—Large, Stiff—Does not lodge easily.
4. **Heads**—Large, Long, Heavy.
5. **Grains**—Large, Yellow—Mostly Single (47% grain to straw).
6. **Cold Resistance**—Strong, 30% more resistant than regular Fulghum.
7. **Disease Resistance**—Has shown decided resistance to smut, though not smut proof. In our test work, seed of this strain, though heavily inoculated with smut spores before planted, developed only 1.85% smut against 21.4% for regular Fulghum oats.
8. **Habit of Growth**—Grows larger than regular Fulghums. Has larger straw, which is very desirable where intended for use as forage or for grazing.

“HUMCO” Appler 294-60

STRAIN-3

A BRAND NEW OFFERING, A very OUT-
STANDING strain of Appler Oats.

IT IS SUPERIOR in Uniformity of Type and Yield to any other Strain of Appler Oats we have offered.

In its general characteristics, habit of growth, type, earliness, it is similar to our Strain 2 Appler.

Planted the last of October or 1st week November, it will stand as much cold as any oat we know.

It is highly resistant to smut.

BUY ENOUGH THIS SEED TO PRODUCE
YOUR SEED OAT REQUIREMENTS FOR
ANOTHER YEAR.

NO MORE HIGHLY DEVELOPED STRAIN
OF OATS THAN THIS.

Natural Variations Like These Make Possible the Breeding of High Yielding
Superior Strains of Pedigreed Seed Oats

"HUMCO" Abruzzi 226-80 STRAIN-2

This is our **LATEST STRAIN** representing the very best in **HIGH YIELD OF SEED** and **FORAGE**.

ITS CHARACTERS:

1. **Production**—Heavy.
2. **Grains**—Large.
3. **Per Cent Grain**—High (35 to 42%).
4. **Heads**—Drooping, Heavy, Long.
5. **Straw**—Large, Stiff.
6. **Bearding**—Regular.
7. **Growth**—Just Right (average height 5 to 5½ feet).

As a **Winter Cover Crop** for the Coastal Plain section of the South, this rye has no superior. It makes a heavy growth of vegetable matter in Fall and early Winter. Careful

tests show four tons per acre from October 15th to February 11th.

As a **Winter Grazing Crop**, the best we know of. It grows upright. It is easy to graze.

As a **Seed Producer** it has no superior in the South. On good land you can depend on 18 to 28 bushels per acre, against 8 to 10 bushels for ordinary rye.
